

53V input maximum run voltage  
 20 Amp max continuous current draw (roughly, depends on thermals)  
 50 Amp peak per motor absolute maximum

CONSIDER THERMISTOR VOLTAGE IF MOTOR HALLS RUN AT 5V  
 (or punt!?)

Changelog:  
 July 16 2024  
 Change low side pullups to  
 pulldowns so that low side  
 FET is on by default.

Encoder Supports:  
 Single Ended I2C  
 Hall Sensors  
 Differential or Single Ended SPI  
 Dual Channel Analog
